

Never be blindsided or surprised by an outage or service degradation again.

File and Data Transfer software is responsible for moving vast quantities of data around the World each day. Everything from financial transactions to complex logistics to national security, are reliant on technology which when is unavailable, puts your business on hold, costing you money and harming reputation.

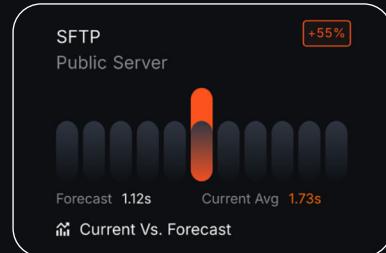

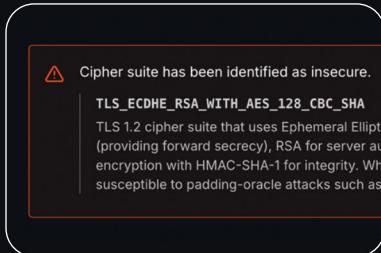

Threpoly is an innovative cloud-based solution, which provides proactive performance and security monitoring for SFTP, FTPS, HTTPS, and AS2 targets. Putting you back in control and remaining always open for business.

- Never be the last to know about slow-downs and outages.
- Immediately identify problematic connections, speeding up diagnosis and correction.
- Always be aware of the security posture of your data transfer solution.
- See the impact of changes in your environment post patch, upgrade or configuration.
- Proactively predict scalability needs to support business growth.
- Report accurate SLAs and up-time statistics to stakeholders.

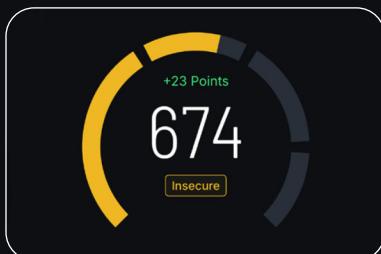

Outages Put Your Business on Hold

Every Second Costs... Every Failed Connection Affects Reputation

Algorithm & Cipher Vulnerabilities

Threpol inspects the KEX, encryption algorithms, HMACs and any authentication keys/certs for known weaknesses and vulnerabilities.

Security Health Assessment

Threpol assesses performance, ciphers, authentication, solution version to provide an overall score, with recommended improvements.

Live Performance Monitor

Threpol analyses the stages of connection, giving you visibility of service availability, upload/download speed and where any issues may lie.

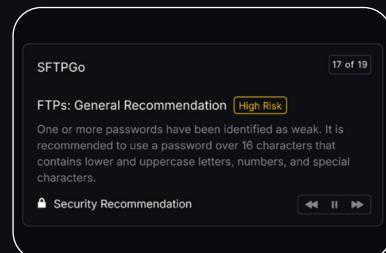

Congestion Forecasting

Based on historical patterns, Threpol can identify areas of frequent congestion, to assist with better resource allocation and planning.

File SLA Monitoring

Threpol monitors for the arrival of critical files, ensuring onward services and third-parties get the files they need, at a time they are expecting them.

Actionable Insights & Alerting

Threpol provides recommendations for improvement and alerting across all its measured metrics, including outages and slow-downs.
